Hello,

Imagine you are testing the following [test link](#) to give feedback to the developer:
- Report 3 bugs you can find in a detailed manner
- Write Gherkin scenarios to describe the expected behaviour
- Using a test automation framework of your choice, write tests that would test those bugs and help the developer verify their fix is working correctly

Note:
- If you find more than 3 bugs, prioritise which bugs to report and automate accordingly
- The estimated time to complete the task is around 90 minutes
